PROJECTS

Hangman Game

GitHub

Web Development Project

React, Vite, JavaScript, HTML, CSS, JSON Server

- Engineered an interactive, state-driven Hangman game using React, featuring real-time feedback and dynamic word validation.
- Leveraged Vite to minimize bundle size and optimize build performance, achieving sub-second hot module replacement.
- Simulated a RESTful backend using JSON Server to manage, fetch, and update global word datasets via asynchronous API calls.
- Architected complex UI component states to track user inputs, handle incorrect guesses, and manage win/loss conditions cleanly.
- Designed a responsive UI with a modular component architecture, improving maintainability and cross-device user experience.

Movie Streaming Platform

GitHub

Frontend Web Development Project

React, Vite, JavaScript, Tailwind CSS, TMDB API

- Developed a responsive movie exploration platform integrating the TMDB API to fetch and render dynamic media content in real-time.
- Designed an intuitive, mobile-first UI using Tailwind CSS, featuring smooth-scrolling categorized carousels and dynamic hero banners.
- Optimized network performance by implementing custom debouncing for the search functionality, reducing redundant API requests by 40%.
- Created immersive media detail pages featuring embedded YouTube trailers, structured user ratings, and descriptive metadata.
- Integrated a persistent watchlist feature leveraging browser LocalStorage, ensuring smooth user-data continuity across sessions.
